

Troubleshooting emulator_kali network

C:\Users\Dell\AppData\Local\Android\Sdk\emulator\emulator.exe -avd Pixel_9_Pro_XL

= On Windows Host (PowerShell as Administrator)

=

1. Forward traffic from host IP:5555 → localhost:5555 (emulator)

```
netsh interface portproxy add v4tov4 listenport=5555  
listenaddress=192.168.1.10 connectport=5555 connectaddress=127.0.0.1
```

2. Allow incoming traffic to port 5555 through Windows Firewall

```
New-NetFirewallRule -DisplayName "Allow ADB Inbound" -Direction Inbound -LocalPort 5555 -  
Protocol TCP -Action Allow
```

Optional: Remove the port proxy if needed

```
netsh interface portproxy delete v4tov4 listenport=5555 listenaddress=192.168.1.2
```

= On Kali Linux VM =

3. Connect to the Android Emulator running on Windows host

```
adb connect 192.168.1.6:5555  
adb tcpip 5555
```

4. Verify the emulator is connected

```
adb devices
```

for example here if i would test i will search in the reversed code in jadx for the keyword provided in the page and see if the necessary steps is not taken then i can tell it is vulnerable
